## Exterior finishes for masonry and concrete structures

Triarch materials are well known for providing performance oriented interior decorative finishes. Several Triarch materials are also designed for exterior environments, Duroplex® EXT and Granite®. Both materials use exterior grade resin technology and have been rigorously tested both in the lab and in the real world. See our website for product details.

Al Ghurair Center (above) was installed 10 years ago in Dubai. Original installation of more than 1 million square feet (100,00 SQM) of Duroplex EXT, in the Tuscany DSII pattern. Phase II was completed in 2010. At right, Indian River National Bank in Vero Beach FL selected Duroplex EXT to provide an upscale solid exterior finish.

Top right displays Granite, a seamless stone veneer. Transform concrete and masonry surfaces with a stone veneer. Granite is a proven exterior performer, appropriate for use in every market, from residential to commercial to institutional.

**Project Photos:**

- ⇒ *Miami—high UV, hurricane driven rain. Neiman Marcus—Coral Gables—installed in 1996.*
- ⇒ *Kingdom of Saudi Arabia—intense sun, wind driven sand. Beautiful Duroplex EXT on luxury residences.*
- ⇒ *Aruba Residence on the equator, Duroplex EXT performs.*
- ⇒ *North Shore High School—Houston, Texas—Duroplex EXT over glazed block.*

## Duroplex EXT—provides a seamless decorative exterior finish

Refined for interiors and tough for exteriors

*Aruba homeowner (2010):* "We are glad that we will be able to buy direct for our small expansion. This is for use with our existing house. It was built in 1999 and the Duroplex was applied then. Every surface of the house (vertical and horizontal), internal and external, is covered with Duroplex. The house is extremely exposed to wind, salt, tropical sun and grit but the Duroplex has stood up remarkably well. The only maintenance we have had is to power wash about every three years. We have even power washed the interior to remove accumulated dust."

## *Featured Project: Palmetto High School - high school tough!*

Architect: Ranon & Partners Inc (Tampa), Installer: O'Guin Decorative Arts

Wedged between the growing communities of Tampa and Sarasota in Manatee County, the Palmetto High School was faced with a rapidly growing student population and an aging campus. The challenge for Ranon & Partners was to draw together the campus into a coordinated appearance between older existing buildings and newly constructed facilities. Granyte figured prominently into the architectural detailing and helped to provide a unifying exterior finish across old and new buildings that will provide years of service.

World Series 2011, Busch Stadium in St. Louis, home of the St. Louis Cardinals. Duroplex covers much of the vertical surfaces throughout the stadium with our Antigua DS II and Alexandria DMM finishes. Constructed in 2006 as an open air stadium, the Duroplex not only has to withstand the several million people per year that move through the stadium, but it has to withstand all the elements that St. Louis might have to offer, driving rain, sleet, snow, sub freezing temperatures and some very hot summers.

In nearby Clayton, MO, a commercial office park utilized Duroplex EXT Spray Pattern DS IV to create attractive building exteriors.
