Las Vegas, Nevada – <http://www.lasvegascitywebsite.com> Every so often there are projects that truly stand out for design excellence and project execution. The Clark County Government Center, completed in 1997, is one such project, garnering awards for the architect and the contractors. Duroplex was executed in a WASH DS II pattern throughout the facility. Photos from the project continue to be featured on the architect's website and are as exciting today as they were when the project was initially completed. www.fentressarchitects.com

No doubt the success of the Duroplex at the Government Center in terms of withstanding the thousands of people that visit the Government Center lead to the selection of Duroplex for the Clark County Regional Justice Center built in 2005 and located just three blocks away on Lewis Street. The Justice Center, designed by Las Vegas architect Tate Snyder Kimsey, is a 14 story facility handling the criminal and civil courts. www.tatesnyderkimsey.com Instead of the WASH DS II used in the Government Center, the Justice Center installed Duroplex in a Tight Knock Down Fissured pattern throughout. A current expansion is planned for the Justice Center and Duroplex has been selected (again) for the expansion. The photos below were taken in March of 2011, some 14 years after the installation at the Government Center. The project and the Duroplex looks as good today as it did upon the original installation.

Notable Project Profile

Job Name:
Location:

Clark County Government Center
Las Vegas, NV

Rotunda – main lobby – Wash DS II to match Sandstone

Job Name:
Location:

Clark County Government Center
Las Vegas, NV

Decorative skylight baffles in Duroplex – perhaps 40 feet diameter
